

Robot's Front-view

VLM Semantic Recasting
+ VFM Spatial Grounding

Language Instruction

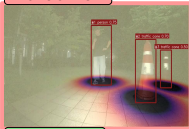

"Go behind the traffic cones without colliding anything. Also, never enter the grass yielding for pedestrians"

From what I **see** and what I'm **told**, let me **pull out only** what the **robot needs to navigate** safely :

Terrain traversability

Collision risk

Heading preference

Passable gap

Non-Traversable

Traversable

Action on the Cost Map
